## Z-Wave To 0-10V LED Dimmer (

## Important: Read All Instructions Prior to Installation

## Function introduction

Product Data

| Radio Frequency | $868.42 \mathrm{MHz}(\mathrm{EU}) / 908.42 \mathrm{MHZ}(\mathrm{US}) / 921.42 \mathrm{MHz}(\mathrm{ANZ}) / 869.0 \mathrm{MHz}(\mathrm{RU})$ |
| :---: | :---: |
| Input Voltage | AC100-240V |
| Input Current | $60 \mathrm{~mA} \mathrm{Max}$. |
| Output Signal | $2 \times(0-5 \mathrm{VDC}) / 2 \times(0-10 \mathrm{VDC}) / 2 \times(0-15 \mathrm{VDC})$ |
| Output Current | $\mathrm{Max} 20 mA$. |
| Operating temperature | 0 to $40^{\circ} \mathrm{C}$ |
| Relative humidity | $8 \%$ to $80 \%$ |
| Dimensions | $170 \times 59 \times 29 \mathrm{~mm}$ |

## Safety \& Warnings

DO NOT install with power applied to device
DO NOT expose the device to moisture

## Quick Start

How to install:
Step 1: power on the Z-Wave to 0-10V LED dimmer, the connected 0-10 dimmable LED device will flash quickly for 6 seconds, triple press the "Inclusion/Exclusion" button, then go on step 2 . If it is not, then terminate he operation, please refer to the part "Inclusion" of this manual to learn how to include the dimmer to Z-Wave etwork

Step 3: the LED dimmer is waiting the connected 0-10V dimmable LED device stays solid on 3 s to indicate successful inclusion.

## Product Description

The Z-Wave to 0-10V LED dimmer is a Z-Wave device that is used to switch ON/OFF and adjust light intensity
the connected $0-10 \mathrm{~V}$ dimmable LED device and can be controlled by other Z-Wave devices. The dimmer can e included and operated in any Z-Wave network with other Z-Wave certified devices from other manufacture and/or other applications. All non-battery operated nodes within the network will act as repeaters regardless of vendor to increase reliability of the network.
he device cannot act as Z-Wave network controller (primary or secondary), so a security enabled controller is needed for take full advantage of all functionally for the device. It also supports the Over The Air (OTA) feature for the product's firmware upgrade.
he encryption modes that the LED dimmer supports are S0, S2 Unauthenticated. When the LED dimmer is解 mode or disable encryption. (The primary controller/gateway shall support encryption mode configuration).

## Installation Guide

Please read carefully the enclosed user manual before installation of the LED dimmer, in order to ensure an error-free functioning
ATTENTION: Prior to the assembly of the product, the voltage network has to be switched OFF and ensured against re-switching

## nclusion (adding to a Z-Wave network)

. Set primary controller/gateway int
o turn your controller into inclusion)
2. Power on the LED dimmer, make sure the LED dimmer does not belong to any Z-Wave network (please refer to the part "How to check whether the LED dimmer included to a network" of this manual).

1) When the connected 0-10V dimmable LED device flashes quickly for 6 seconds, it means the LED dimmer does not belong to any network. Triple press the "Inclusion/Exclusion" button, it will be set into inclusion mode automatically, and waiting to be included
2) When the connected 0-10V dimmable LED device is under solid on status, it means the LED dimmer has already been included into a network. First you have to set the LED dimmer into exclusion mode, once excluded, it will be set into inclusion mode automatically, and waiting to be included.

The connected 0-10V dimmable LED device stays solid on 3 s to indicate successful inclusion.

## Exclusion (removing from a Z-Wave network)

There are two exclusion methods:
Method 1: Exclusion from the primary controller/gateway as follows
Set the primary controller/gateway into exclusion mode (Please refer to your primary controllers manual on how to set your controller into exclusion).
2. Triple press the "inclusion/exclusion" button, the LED dimmer will be set to exclusion mode, the connected 0 OV dimmable LED device will flash quickly for 6 seconds, and waiting to be excluded, then LED device stays solid on 3 s to indicate successful exclusion
There are 3 methods for the LED dimmer to quit "exclusion mode". Once the LED dimmer quits "exclusion mode" the LED light will stop the fast flash status.

Automatically quits after successful exclusion
. Quits after 10 seconds timeout
3. Power off and power on the LED dimmer.

Note: When the LED dimmer already included to a network, triple press "inclusion/exclusion" button, the LED dimmer will be set into exclusion mode and quit exclusion mode alternatively.)
Method 2: Factory reset the LED dimmer will force the LED dimmer to be excluded from a network. (please refer o the part "Factory Reset" of this manual)

Note: Factory reset is not recommended for exclusion, please use this procedure only if the primary controller/gateway is missing or otherwise inoperable

## How to check whether the LED dimmer already included to a network

There is one method to check whether the LED dimmer already included to a network: Power off and power on the LED dimmer, if the connected $0-10 \mathrm{~V}$ dimmable LED device flashes quickly for 6 seconds, it means the LED immer does not belong to any network. When the connected 0-10V dimmable LED device is under solid on status, it means the LED dimmer has already been included into a network.

## Factory Reset

Press and hold down "inclusion/exclusion" button for over 10 seconds, connected 0-10V dimmable LED device stays solid on 3 s to indicate successful factory reset

## Association

Z-Wave devices control other Z-Wave devices. The relationship between one device controlling another devic called association. In order to control a different device, the controlling device needs to maintain a list of devices that will receive controlling commands. These lists are called association groups and they are always related to certain events (e.g. button pressed). In case the event happens all devices stored in the respective association group will receive a common wireless command.

## Association Groups:

| Group <br> Identifier | Group <br> Name | Max <br> Nodes | Description |
| :---: | :---: | :---: | :--- |
| 1 | Lifeline | 5 | 1. LED Dimmer Factory Reset, send Command Class "Device <br> Reset Locally Notification V1" to associated devices of this <br> group to report factory reset information when factory reset the <br> LED dimmer. <br> 2. When LED dimmer ON/OFF or light intensity value changes, <br> send Command Class "Basic Report to associated devices of <br> this group to report ON/OFF or light intensity value information. |

## Set and unset associations:

(Note: All association information will be cleared automatically once the LED dimmer is excluded from a network.)

Set association by operating primary controller/gateway to send packets to the LED dimmer:
The primary controller/gateway sends packets to the LED dimmer using "Command Class ASSOCIATION"

## Operating the device

1. Short press inclusion/exclusion button on the LED dimmer to switch ON/OFF the connected LED device
2.Press and hold down inclusion/exclusion button on the LED dimmer to adjust light intensity of the connected LED device.

## Node Information Frame

The Node Information Frame is the business card of a Z-Wave device. It contains information about the device type and the technical capabilities. The inclusion and exclusion of the device is confirmed by sending out a Node Information Frame. Beside this it may be needed for certain network operations to send out a Node Information Frame.

How to send out Node Information Frame
When the LED dimmer is set to inclusion/exclusion mode again, it will send out Node Information Frame, there are 2 kinds of operation as follows:

1. When the connected $0-10 \mathrm{~V}$ dimmable LED device is under solid on status, triple press the
"inclusion/exclusion" button, LED dimmer will be set to inclusion/exclusion mode, then send out Node Information Frame
2. When the connected $0-10 \mathrm{~V}$ dimmable LED device is under fast flashing status for 6 seconds, which means the LED dimmer is under inclusion mode, there are two kinds of operation:
) Triple press inclusion/exclusion button, the LED dimmer will be set to inclusion mode again, and send out Node Information Frame.
2) Power off and power on the LED dimmer, LED dimmer will be set to inclusion mode automatically, and send out Node Information Frame

## Technical Data

| Wireless Range | up to 100 m outside, on average up to 40 m inside buildings |
| :---: | :---: |
| Radio Frequency | $868.42 \mathrm{MHz}(\mathrm{EU}) / 908.42 \mathrm{MHZ}$ (US)/921.42MHz (ANZ) $/ 869.0 \mathrm{MHz}(\mathrm{RU})$ |
| SDK | 6.71 .01 |
| Explorer Frame Support | Yes |
| Device Type | Light Dimmer Switch |
| Generic Device Class | Switch Multilevel |
| Specific Device Class | Power Switch Multilevel |
| Routing | Yes |
| FLiRS | No |

## Z-Wave Plus Info

| Parameter | Value |
| :---: | :---: |
| Z-Wave Plus Version | 1 |
| Role Type | Slave Always On |
| Node Type | ZWAVEPLUS |
| Installer Icon Type | $0 \times 0600$ (ICON_TYPE_GENERIC_LIGHT_DIMMER_SWITCH) |
| User Icon Type | $0 \times 0600$ (ICON_TYPE_GENERIC_LIGHT_DIMMER_SWITCH) |

## Manufacturer Specific

| Parameter | Value (hex) |
| :---: | :---: |
| Manufacturer ID | $0 \times 0330$ |
| Product Type ID | $0 \times 0200$ (EU), 0x0201(US), 0x0202(ANZ), 0x021A(RU) |
| Product ID | $0 \times D 002$ |

## SUPPORTED COMMAND CLASS

| Node Info | Vapport S2 |  |
| :---: | :---: | :---: |
| COMMAND_CLASS_ZWAVEPLUS_INFO | V 1 |  |
| COMMAND_CLASS_SECURITY | V 1 |  |
| COMMAND_CLASS_SECURITY_2 | V 2 |  |
| COMMAND_CLASS_TRANSPORT_SERVICE | V 1 |  |
| COMMAND_CLASS_SUPERVISION |  |  |
|  | V 2 | YES |
| COMMAND_CLASS_MANUFACTURER_SPECIFIC | V 2 | YES |
| COMMAND_CLASS_VERSION | V 4 | YES |

| COMMAND_CLASS_SCENE_ACTIVATION | V 1 | YES |
| :---: | :---: | :---: |
| COMMAND_CLASS_SCENE_ACTUATOR_CONF | V 1 | YES |
| COMMAND_CLASS_NOTIFICATION | V 8 | YES |
| COMMAND_CLASS_CONFIGURATION | V 2 | YES |
| COMMAND_CLASS_ASSOCIATION | V 2 | YES |
| COMMAND_CLASS_ASSOCIATION_GRP_INFO | V 3 | YES |
| COMMAND_CLASS_POWERLEVEL | V 1 | YES |
| COMMAND_CLASS_DEVICE_RESET_LOCALLY | V 1 | YES |
| COMMAND_CLASS_FIRMWARE_UPDATE_MD | V 4 | YES |

## Notification Command Class

The dimmer supports Emergency shutoff, when a load malfunction is detected, the dimmer will send out Emergency shutoff status to Lifeline.

| Notification Type | Notification |
| :---: | :---: |
| System (0x09) | Emergency shutoff status (0x07) |

## Configuration Command Class

| Parameter Number | Size | Description | Default Value |
| :---: | :---: | :---: | :---: |
| 2 | 1 | Info: Saving load state before power failure 0-shutoff load <br> 1-turn on load <br> 2-save load state before power failure | 0 |
| 3 | 1 | Info: Enable/disable to send the basic report to the Lifeline when the load state changed <br> (When value set as 1, re-power on the dimmer, it will send Basic report automatically) <br> 0-Disable to send Basic report <br> 1-Enable to send Basic report | 1 |
| 5 | 1 | Info: Choose a cool light stage mode <br> Choose a cool light stage mode <br> $0=$ inactive of light stage mode <br> 1 =fade in and fade out mode, colors set by parameter 8 <br> 2=flash mode, colors set by parameter 8 | $0 \times 00$ |
| 6 | 1 | Info: Speed of stage mode <br> $0 \sim 0 x F F: 0$ is the slowest, 255 is the fastest | 0xF3 |
| 7 | 1 | Info: Execution times of stage mode 0: unlimited times <br> 1~0xFF: execution times 1~255 | $0 \times 00$ |
| 8 | 1 | Info: The hue of stage mode The hue is only valid for fade in and fade out mode, flash mode 0~0xFF: hue | $0 \times 00$ |
| 9 | 1 | Enable/disable the dimmer to be added to and removed from a network through external switch(when enables this function, triple press the external switch within 1.5 seconds to enable the dimmer be added to or removed from a network) <br> 0 - disable <br> 1 - enable | 0 |

Remarks: parameter number 5~8 are united parameters, it is recommended to use Configuration Bulk Set to configure synchronously

## Parameter Number Definitions

Parameter number 2 defines the load state after re-power on it:
Value 0 is off state
Value 1 is on state
Value 2 is the state before re-power on

Parameter number 3 enables/disables to send Basic report to the Lifeline when load state changed: Value 0 disables to send
Value 1 enables to send.

Parameter number 5 defines light stage mode
Value 0 inactivates light stage mode
Value 1 is fade in and fade out mode with colors set by configuration parameter 8.
Value 2 is flash mode with colors set by configuration parameter 8 .
Parameter number 6 defines the speed of stage mode:
Value $0-0 \times$ FF configurable, 0 is the slowest, 255 is the fastest
Parameter number 7 defines execution times of stage mode:
Value 0 is unlimited times.
Value $1 \sim 0 \times F F$ is $1 \sim 255$ times

Parameter number 8 defines the hue of stage mode:
Value 0~0xFF is hue 0~255.
Parameter number 9 enables/disables to be added to and removed from a network through external switch: Value 0 disables
Value 1 enables
